

10. Raw Data - Community Specific Health Scan Information

You will find a USB key or 'memory stick' containing the raw data that was collected during the Community Health Scan in your community at the front of this toolkit.

It is a copy of the information that was sent to each Health and Social Department in 2009.

Please copy this information to the hard drive of your computer if it is not already there and keep the USB key in a secure place as it contains “sensitive” information.

The raw data on the USB key is a transcript of the comments people in your community made during the Community Health Scan activities. It can be drawn upon as a source of information about community needs when consultants or health and social staff are conducting health planning activities for your community in order to “avoid remaking the wheel.” You can also “cut and paste” from the Community Health Scan report when you write proposals, health plans or other documents.

Please contact the Council of Yukon First Nations Health and Social Development Department at 867.393.9240 if you would like assistance with any of this material or have any questions.

The Council of Yukon First Nations Health and Social Department would also like to hear of other purposes you have found for this material.

Funding for this project was provided by Health Canada through the Aboriginal Health Transition Fund. The opinions expressed in this document are those of the authors/researchers and do not necessarily reflect the official views of Health Canada or the Council of Yukon First Nations. This information in this document can be shared for non-commercial purposes only
