 Abbott PanBio at-home rapid antigen test for COVID-19

Your testing kit contains:
1. nose swab
2. empty tube
3. bottle of liquid
4. test unit

You will need:
✓ clean, level surface
✓ paper towel
✓ hand sanitizer
✓ timer or clock

Results (Aft er 15 minutes)

Negative — One line
One line at the C (control) mark, no line at the T (test) mark

Positive — One line at the C (control) mark, one line at the T (test) mark

Please note:
✓ A single negative result cannot be used to rule out COVID-19 in a person with symptoms.
✓ Stay at home if sick and repeat the test in 48 hours.

You must:
✓ Isolate immediately.
✓ If you are at risk and you have tested positive, please arrange for a PCR test https://yukon.ca/en/get-covid-19-test#lab-based-pcr-testing.
✓ If you test positive using a rapid test, you need to consider yourself as having COVID-19, assume you are contagious, and you and your household must self-isolate. You also need to inform your close contacts.

Note:
It is important to follow the instructions carefully for accurate results.

Before you start:
✓ Clean your hands.
✓ Place paper towel on a clean, level surface.
✓ Open the contents of your testing kit.
✓ Remove the test unit from the wrapper.
✓ Write your name with marker or pencil on the unit if testing more than one person.

For better accuracy of the test, we recommend swabbing both the throat and nostril using the same swab. If you choose to only swab one spot, it must be your nostril (throat swab alone will not give accurate results).

Note:
Do not eat or drink for at least 30 minutes before taking the test.
